

Plan-de-CAMpagne

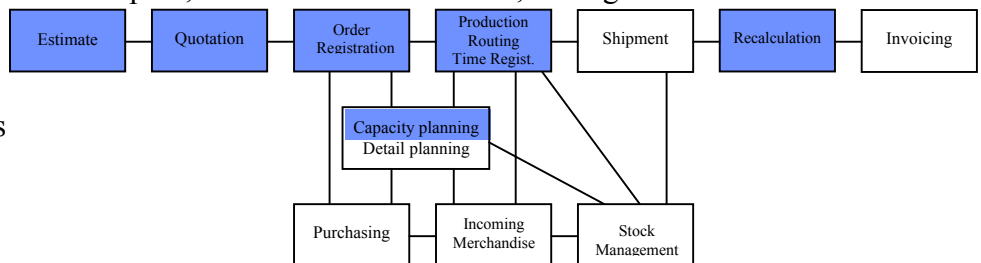

Base module

The Plan-de-CAMpagne Base module has been put together in such a way that the most important steps in the company process have been automated. The user can create estimates and recalculations and make work plans (routings) quickly and efficiently. Management has wide possibilities for obtaining information concerning production progress, staffing, work in progress and similar data. The steps in the blue boxes below become automated with the base module. Of course it is possible to expand the base module so that the other steps are also automated.

Work Planning

In order to set up a calculation or work plan, various files can be used, among which are:

- Client Management
- Internal Operation Places
- External Operation Places
- Material Files
- Personnel File

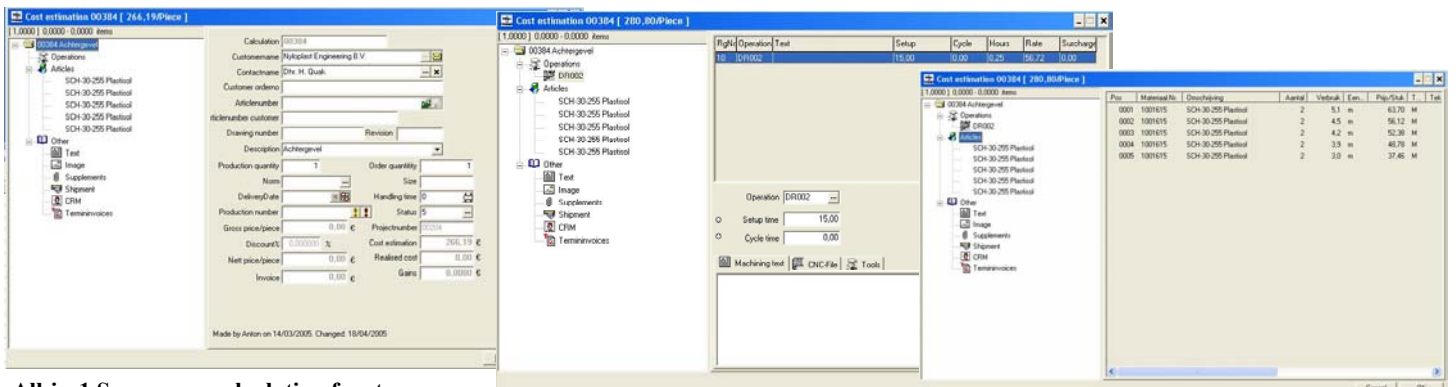

- In order quickly to calculate various files: time tables, standard routes

If the logistics module is active, then data to do with stock and purchasing can be placed in it.

Cost Price Calculation

The importance of a good estimate is obvious. According to this the cost price is determined, on the basis of which the commercial price can be issued. Yet there is usually little time spent on this, because it is such a time-consuming job.

With Plan-de-CAMpagne the matter becomes a bit simpler. The estimate within Plan-de-CAMpagne is made up of a front page, operations page and a materials page. By making use of various routines, time tables, technology tables and standard routes, a calculation is created quickly and easily. The calculation can be conveniently set up by means of a 'tree-view', so that the calculator and the work planner always have the correct information in front of them.

All-in-1 Summary: calculation front page,...

...operations page,...

...materials list.

Weekly Staffing per Operation Place

Quotations and Order Registration

After the calculation has been made, a quotation can be created. This is done with MS Word, by which Plan-de-CAMPagne manages the documents. In addition, various alternative prices can be calculated to create quotations, in order to make the best offer. Plan-de-CAMPagne sticks to what has been offered by client, and for this reason you are

cautioned with respect to price variations with a follow-up quotation. If the order is in-house, there is the possibility of sending an order confirmation.

Routing and Production

After the order has been received, the route and the materials list are released. The starting point is the estimate, and therefore you don't have to double your work and input the data twice. The route is in principle already created with the calculation; after the order has been received, further details of the route can be laid out, with extra operation information if necessary. The material lists can also be adjusted quickly and simply. With a single keystroke the production forms are printed out, whether with barcode or not, and the user himself/herself determines what they will look like.

Production Progress and Recalculation

Times are registered during production. This occurs by means of hours notations or clock stations. It is in this way possible to clock extra operations which are not on the production form. This also makes it possible to work entirely on the basis of the recalculation. With clocking, combination orders can also be clocked. If extra or other materials are used, these are processed in the recalculation, and the production progress can always be viewed. The estimate and recalculation can be compared at any moment, and by doing this differences can be detected early and, if necessary, extra controls can thus be implemented.

Management Information

Plan-de-CAMPagne makes use of a number of files. These can be combined in order to generate various management informational reports. A limited summing up of these is:

- Work in progress
- Capacity summaries
- Comparison of estimate and recalculation
- Weekly records of hours worked
- Status of orders and quotations

Thus does management have the right tools in hand to keep the company running smoothly and in balance.
